

ZHENIS DUISSEKOV

Houston, TX zduissekov@gmail.com [GitHub](#) [Linkedin](#) [Telegram](#)

Backend Engineer (Go, Kafka) | Software Engineer | Distributed Systems

SUMMARY

Backend Engineer with 7+ years of Go experience **building scalable, real-time systems** and distributed microservices. Proven track record in reducing latency, scaling infrastructure, and deploying observability stacks (Prometheus, Jaeger, Grafana) across production systems. Recently **applied LLMs** to improve system-level observability by summarizing logs and detecting patterns. Comfortable with event pipelines, Kafka-based architectures, and large-scale analytics in ClickHouse.

Actively relocating to Houston, TX — open to on-site, hybrid, or remote roles. **Authorized to work in the U.S. as a Green Card holder** (Diversity Visa winner 2024).

QUALIFICATIONS

- Languages & Frameworks: Go (7+ yrs), Python (3+ yrs), NodeJS (3 yrs), gRPC, REST
- Databases & Queues: PostgreSQL, ClickHouse, MongoDB, Redis, Kafka, RabbitMQ
- DevOps: Docker, Kubernetes, GitLab CI, AWS, Prometheus, Grafana, Alertmanager
- Observability: Jaeger, OpenTelemetry
- AI/LLM: Prompt Engineering, OpenAI API, LLaMA, LM Studio
- Testing: Unit/Integration Testing, Profiling, Load Testing
- Architecture: Clean Architecture, Microservices, Multi-threaded Systems
- Tools: Git (GitHub/GitLab), SonarQube, Kibana, Agile/Scrum, Swagger, Postman

WORK EXPERIENCE

QazCode

Backend Developer

June 2023 — Present

Product company in the Nasdaq-listed VEON Group, delivering AI, automation, and analytics solutions to major telecoms across Europe and Central Asia.

- Built and maintained Go-based backend services, containerized with Docker and connected to ClickHouse, PostgreSQL, and MongoDB.
- Applied LLMs in observability tooling to summarize logs and detect performance patterns.
- Regularly audited dependencies for vulnerabilities, resolving security risks including transitive CVEs across critical services.
- Mentored junior engineers, led code reviews, and contributed to shared knowledge initiatives within the backend team.
- Refactored legacy codebases for better modularity, test coverage, and runtime efficiency, reducing maintenance overhead.

- Set up real-time monitoring with Prometheus, Grafana, and Jaeger to track performance and surface system health issues.
- Built analytics infrastructure using ClickHouse to handle large-scale reporting across multiple services.

Beeline Kazakhstan (VEON)

Backend Developer

Mar 2021 — May 2023

Leading telecom provider in Kazakhstan with 11M+ users; part of VEON Group, operating in Big Data, IoT, and mobile finance sectors.

- Implemented open telemetry with Jaeger, improving service maintainability and accelerating issue resolution.
- Refactored critical systems, reducing customer wait times from 30 minutes to 1-2 minutes, boosting sales.
- Developed a monitoring system for real-time event visualization and smart alerts, now in continuous use.
- Designed Kafka + ClickHouse pipeline to handle 1.2 million daily logs and provide actionable insights.
- Optimized indexes in ClickHouse and Postgres for scalability and efficiency.
- Installed SonarQube to identify security vulnerabilities and bugs.
- Expanded test coverage from 32% to 46% across a 32K line codebase.
- Migrated critical tables with minimal business downtime.
- Maintained comprehensive documentation and Swagger.
- Created a robust monthly payment service.

E-Sports Startup (Consulting Role)

Consultant (Part-Time)

Mar 2024 — Nov 2024

- Reviewed and optimized codebase and database structure for better performance.
- Implemented clean architecture principles, error handling, and security best practices.
- Set up CI pipelines and containerized deployments to support early infrastructure needs.

BAIOL (Startup)

Co-founder, Developer

Oct 2017 — Feb 2021

Founder-led startup building monitoring and analytics infrastructure for clients in industrial, finance, and healthcare sectors in Kazakhstan.

- Developed monitoring systems across various industries, including finance, management, and health sectors.

- Created automated data scraping services in Go and Python from various sources.
- Set up monitoring for over 100 servers and 500 workstations.
- Supported long-term operations for a local oil institute through centralized infrastructure monitoring.

EDUCATION

B.Sc. Electrical Engineering

University of Southern California, Los Angeles, USA

GPA: 3.6/4.0

Coursework in signal processing sparked my interest in real-time systems.

M.S. Electrical Engineering

King Abdullah University of Science and Technology (KAUST), Jeddah, Saudi Arabia GPA: 3.7/4.0

Dived into parallel programming and image recognition, building a foundation for optimizing distributed systems at QazCode.
