PROFESSIONAL SUMMARY

BACKEND SOFTWARE ENGINEER — GOLANG, DISTRIBUTED SYSTEMS & OBSERVABILITY

Software Engineer with 7+ years of experience building backend services, distributed systems, Kafka pipelines, and production tooling using Go, Python, PostgreSQL, ClickHouse, Redis, and observability platforms. Experienced in debugging production issues across infrastructure, APIs, CI/CD pipelines, and frontend/backend integrations. Strong focus on reliability, operational visibility, async processing, and scalable service design. Practical experience with OpenTelemetry, Jaeger, Prometheus, Grafana, GitLab CI/CD, and AI-assisted engineering workflows.

CORE SKILLS

Languages	Go (Golang), Python, TypeScript/Node.js, SQL
Distributed Systems	Kafka, RabbitMQ, worker pools, batching, retry/backoff, circuit breakers, async processing
Go Engineering	goroutines, channels, context cancellation, graceful shutdown, pprof, race detector
Data & Storage	PostgreSQL, ClickHouse, Redis, MongoDB, ETL/data pipelines
Observability & Infra	OpenTelemetry, Jaeger, Prometheus, Grafana, Docker, Kubernetes, GitLab CI/CD
Frontend & Testing	React, TypeScript, Playwright, E2E testing
AI & Tooling	OpenAI API, Ollama, AI-assisted debugging/refactoring, LLM-assisted workflows
Languages Spoken	English (Professional), Russian (Native), Kazakh (Native), Turkish (Conversational), Spanish (Elementary)

WORK EXPERIENCE

OptiSigns — Software Engineer | Sept 2025 – Present

- Contribute to migration of a legacy Angular/Meteor platform to React/TypeScript with strong emphasis on parity, reliability, and production-safe rollout.
- Improve Playwright E2E reliability and GitLab CI/CD pipeline stability, including artifact handling, flaky test reduction, and scheduled execution workflows.
- Work across frontend, backend, GraphQL APIs, and MongoDB-backed product workflows to debug production issues and improve operational reliability.
- Use AI-assisted engineering workflows for large codebase analysis, migration planning, debugging, and refactoring while validating parity against existing behavior.

QazCode / Beeline Kazakhstan / VEON Group — Backend Engineer | Mar 2021 – Aug 2025

- Built and maintained Go and Python backend services for telecom-scale internal systems supporting high-volume integrations and operational workflows.
- Developed Kafka consumers using goroutines, bounded worker pools, batching, retry/backoff logic, and context cancellation for reliable event processing under load.

- Designed Kafka-based pipelines to decouple write-heavy workloads from downstream databases, improving resilience and reducing direct database pressure.
- Used ClickHouse, PostgreSQL, Redis, and Kafka for analytics, logging pipelines, operational visibility, and real-time reporting systems.
- Diagnosed production latency and resource issues using pprof, OpenTelemetry, Jaeger, Prometheus, and Grafana to identify bottlenecks across distributed services.
- Prototyped AI-assisted log analysis using OpenAI API and local LLMs to summarize anomalies, latency spikes, and likely root causes.

BAIOL — Co-Founder & CTO | Oct 2017 – Feb 2021

- Co-founded and operated a SaaS monitoring platform supporting infrastructure visibility across 100+ servers and 500+ workstations.
- Built Go and Python integrations for SNMP/IoT-enabled devices, automated data collection, and infrastructure health monitoring.
- Designed backend workflows for collecting, normalizing, and storing infrastructure metrics from multiple client environments.
- Developed React/TypeScript dashboards for real-time visualization, alerting, and operational reporting.
- Led architecture, deployment, customer integrations, and production support in a small high-ownership engineering environment.

Selected Personal Projects & Technical Exploration

- Built and experimented with personal full-stack projects using Next.js, Prisma, SQLite, AI tooling, and automated deployment workflows.
- Explored AI-assisted software development workflows using Claude, OpenAI APIs, and code-generation tools for rapid prototyping and debugging.

EDUCATION

M.Sc. Electrical Engineering — King Abdullah University of Science and Technology (KAUST) — GPA: 3.7/4.0

B.Sc. Electrical Engineering — University of Southern California (USC) — GPA: 3.6/4.0
