SENIOR SOFTWARE ENGINEER | DISTRIBUTED SYSTEMS & FULL STACK

U.S. Permanent Resident (Green Card) – No sponsorship required

PROFESSIONAL SUMMARY

Senior Software Engineer with 7+ years of experience specializing in high-performance distributed systems, event-driven architectures (**Kafka**), and full-stack development (**Node.js/TypeScript**). Expert in building scalable backends on **AWS** with a focus on real-time data pipelines (**CDC**), **NoSQL** databases, and microservices. Proven track record in optimizing low-latency services and interacting with cross-functional teams to deliver production-grade infrastructure.

CORE SKILLS

- **Cloud & Data:** AWS (EC2, S3, Lambda, Managed Kafka), Kafka, CDC (Change Data Capture), NoSQL (MongoDB, Redis, DynamoDB), ClickHouse.
 - **Languages & Frameworks:** Node.js (TypeScript/JavaScript), Golang, Python, SQL, React.
 - **Architecture:** Microservices, Event-Driven, Pipeline Orchestration, CQRS, Saga, Circuit Breakers.
 - **DevOps & Observability:** Docker, Kubernetes, CI/CD, OpenTelemetry, Prometheus, Grafana.
-

WORK EXPERIENCE

OptiSigns | Software Engineer | Sept 2025 — Present

- Designed and maintained high-performance microservices using **Node.js** and Golang for a global digital signage platform.
- Developed **TypeScript/React** components for the “SmallApps” ecosystem, integrating backend APIs with real-time player behavior.
- Optimized **AWS**-native workflows and leveraged AI-assisted tooling to accelerate development and refactoring within production constraints.
- Collaborated closely with cross-functional teams to align backend capabilities with frontend requirements and overall system pipeline.

QazCode (Beeline Kazakhstan / VEON Group) | Backend Engineer | March 2021 — Aug 2025

- **Kafka & CDC Pipelines:** Productionized an event-driven pipeline processing 1.2M+ logs/day; implemented **CDC (Change Data Capture)** patterns to sync data across **NoSQL** and analytical stores.

- **Microservices Architecture:** Scaled robust services in **Node.js** and Go, implementing Saga and Circuit Breaker patterns to ensure 99.9% reliability.
- **Performance Tuning:** Achieved sub-500ms response times for mission-critical endpoints by diagnosing bottlenecks with OpenTelemetry + Jaeger.
- **Real-time Observability:** Built monitoring stacks on **NoSQL**/ClickHouse, delivering Grafana dashboards for real-time root cause summaries.

BAIOL (Startup) | Co-Founder & CTO | Oct 2017 — Feb 2021

- Architected SaaS monitoring for Finance and Oil & Gas sectors, scaling infrastructure on **AWS** to 100+ servers.
- Developed automated data integration tools and built interactive **React + TypeScript** dashboards for real-time industrial reporting.

EDUCATION

- **M.Sc. Electrical Engineering** | KAUST | GPA: 3.7/4.0
- **B.Sc. Electrical Engineering** | University of Southern California (USC) | GPA: 3.6/4.0
